Flower Food

Monarch Butterflies spend summer in Canada and fly south to warmer places for the winter. Have fun colouring this Monarch going to drink nectar from an Echinacea flower.

Q: I wonder what young butterflies eat?

A: Caterpillars eat leaves!

See if you can spot a Monarch or other butterfly in your garden or around town. What did it look like and what was it doing? If you make a drawing, poem or song of your butterfly, we would love to see or hear it!
